

BLU 200 + C 200 + S 500 + ECP 12

GENTLE PROCESSING OF SENSITIVE LIQUID DOSE PRODUCTS.

Variable feeding
LiPro, SyPro, manual

Insertion of diverse product information
leaflets, booklets, other pack inserts

Track & Trace by Uhlmann
with the new S 500 serialization platform

Intuitively correct operation
with SmartControl, apps covering all production steps

Medical device tracking
from the VisioRead camera to the pallet

Simple and reliable blister transfer
for sealed blisters and clamp packs

Types of closure
tuck-in, tamper-evident with hot-glue, fourth flap

New end-of-line packaging generation:
“Uhlmann powered by pester pac automation”
Case packaging and palletizing combination, including aggregation

SECONDARY PACKAGING OF LIQUID DOSE PRODUCTS – GENTLE AND HIGHLY FLEXIBLE

Blister machine BLU 200 and Cartoner C 200: two perfectly coordinated components for entry into the highly flexible secondary packaging of liquids at a maximum output of 200 blisters and 200 cartons per minute.

UHLMANN LIVE demonstrates an integrated, customized solution for the packaging of different liquid dose products in a combination blister made of bio-based PET. The Blister machine BLU 200 is fitted with medical device tracking, carton serialization is either integrated into the cartoner or carried out using the new S 500, and the codes – from the production data of the pens, to the cartons, to the pallet – are aggregated. The packaging of the cartons in cases and their stacking on pallets is highly automated using the innovative combination of a case packer and a palletizer – the ECP 12. This is the first end-of-line packaging solution developed in cooperation with pester pac automation.

Output data at a glance:

BLU 200	max. 200 blisters/min.
C 200	max. 120/200* cartons/min.
S 500	max. 300/500* cartons/min.
ECP 12	max. 12 cases/min. max. 6 pallet cycles/min.

* Optional upgrade
