

BEC 200 + S 500 + ECP 12

SOLIDS LINE FOR DEMANDING PACKAGING FORMATS: FEEDING, END-OF-LINE PACKAGING, SERIALIZATION.

Variable feeding

SimTap, brush box, or vibratory feeder with segment roller

Direct, reliable blister transfer

format-free for fast changeovers

Track & Trace by Uhlmann

with the new S 500 serialization platform

Intuitively correct operation

with SmartControl, apps covering all production steps

Platen sealing station for standard formats and special applications

such as childproof blisters

Blister and redundant magazine

automatic first filling, format-free adjustment

Types of closure

tuck-in, tamper-evident with hot-glue, fourth flap

New end-of-line packaging generation: "Uhlmann powered by pester pac automation"

Case packaging and palletizing combination, including aggregation

MEETING COMPLEX SPECIFICATIONS WITH A CONSISTENTLY PRODUCTIVE PACKAGING PROCESS

The integrated and pharmaceutically reliable processing of small batches of demanding packaging formats – the Blister line BEC 200, S 500, and ECP 12 combination is the answer here. The BEC 200 includes a lid foil preheating function, which is ideal for childproof blisters, for example, and can up its output when demand increases. The output of 200 blisters and 150 cartons can be upgraded to a maximum of 300 blisters per minute.

Carton serialization can be integrated into the cartoner or be carried out separately from the line using the new S 500. Even more compact and with added flexibility, this is also the ideal serialization solution for existing machines. The next new portfolio addition is the first end-of-line packaging machine developed in cooperation with pester pac automation: the ECP 12 offers combined automated case packaging and palletizing on the smallest of footprints with maximum process reliability.

Output data at a glance:

BEC 200 max. 200 blisters/min. and 150 cartons/min.
Added output based on a software upgrade up to 300 blisters/min.

S 500 max. 300/500* cartons/min.

ECP 12 max. 12 cases/min.
max. 6 pallet cycles/min.

* Optional upgrade
